What’s happening @ STEAM Camp This Week?

**Electronic Bugs**  
The Math Café

Build, test, and customize an electronic butterfly that *literally* flies across the ground, steering itself like a mini Roomba Robot.

**SteamPunk Pinwheels**  
The Science & Engineering Lab

Play with gears, compasses, protractors, rulers, and power tools to build a kinetic pinwheel sculpture of your own design.

**Helping Hands**  
The Community Meeting Room

Uncover the purpose and powerfully simple design of prosthetic limbs while working to create your own artificial hands and fingers.

When you’re not in official classes, you can continue to tinker on your own if you’d like. There are toys and tools available in the Student Lounge for you and your newfound friends to play with.
